You can also use "Drag and Drop" function for changing the category for the certain application. In order to do this, pull any application to the upper key of the current category and select in the category menu the category where you want the application to be transferred.

"Tabs view" mode

You can use this mode in "MegaLauncher Preferences". To open the whole category list press the "triangle" symbol in the left part of categories To change the application category use "Drag and Drop" function and pull the icon to the category where you want to move the application.

Lower panel

All lower icons are multifunctional. After pressing the icon the appropriate box opens. The icon list appears after pressing the area to the right of the icon. The chosen icon is stored and can be changed by touching the selection area. A new icon can also be selected here.

Bottom toolbar icons

- 1. Big icons displaying after touching the right field you can choose the amount of columns for this type of display.
- 2. Small icons displaying after touching the right field you can choose the amount of columns for this type of display.
- 3. Displaying of all the applications according to groups.

Use the "Drag and Drop" function for activating the functions mentioned below:

1. Archive Box. If there are some rarely used applications in your device you can put them into "Archive Box". Each application, placed in "Archive Box" is compressed and as a result you save up to 50% of memory.

2. Info Box. All the information about applications and database that your device has.

3. Beam Box. Allows to transfer any application to another device.

4. Trash Box. All the applications sent to "Trash Box" can be restored or deleted completely.

1	

Use the "Drag and Drop" function to do the following:

 Hot Appl. This is the list of the frequently used applications. You can pull any application into this list or after opening the list press the triangle symbol.
Recent list. In this list 10 the most frequently used applications are registered automatically. This information is statistical and allows to start the application in the quickest way.

3. Common list. . In this list 10 applications used last are registered automatically. This information is statistical and allows to start the application in the quickest way.

- Back UP Box. This function allows to store the marked applications in your PC. In order to do this, you should mark the applications to be transferred to PC. To activate this process you press "BackUP off" key. "BackUP on" state will allow you during synchronization to transfer all the marked files into "Backup" folder on your PC (directory c:\Palm\Backup).
- 2. TestCenter. Diagnostic utilities allow you to test the serviceability of all the keys and also to check the screen quality of your device.

"Touch and Wait" function

With any application icon pressed and held the "Touch and Wait" function (Quick operation) is activated automatically. It allows to delete, archive, rename or transfer the selected application to another device. In this box you can activate the selected application or change the category. The "Touch and Wait" function is an alternative for "Drag and Drop". You can regulate time of holding after which this menu appears in MegaLauncher Preferences.

Full screen mode

After pressing this icon the MegaLauncher changes over to full screen mode. To return back to the standard mode press the icon one more time.

MegaLauncher II Preferences

川 🛛 MegaL II Preferences 🛛 🖂
